Definition

The experiment was made of 3 actions, to vary conditions in your system, and 0 probes, to collect objective data from your system during the experiment.

Steady State Hypothesis The steady state hypothesis this experiment tried was “**Services may degrade**”.

Before Run The steady state was verified

Probe	Tolerance	Verified
order-api-health	[200]	True
notifier-health	[200]	True

After Run The steady state was not verified.

Probe	Tolerance	Verified
order-api-health	[200]	False

Method The experiment method defines the sequence of activities that help gathering evidence towards, or against, the hypothesis.

The following activities were conducted as part of the experimental's method:

Type	Name
action	add-timeout-rabbitmq
action	create-order
action	remove-timeout-rabbitmq
